

AXIAD CONFIRM

Adding Identity Verification to Axiad Conductor

As identity-based threats continue to grow, organizations need to ensure that only verified users access critical systems, applications and services. Axiad Confirm enhances the Axiad Conductor credential management system (CMS) by adding identity verification capabilities, so organizations can quickly validate user identities before issuing or using credentials. By integrating identity verification into the credential management workflow, Axiad Confirm reduces risk, ensures regulatory compliance, and prevents unauthorized access from the beginning to the end of the authentication process.

Identity Proofing: A Core Link in Credential Security

Traditional authentication solutions assume the user enrolling or renewing credentials is who they claim to be. But without robust identity verification, IAM and identity teams risk issuing strong credentials to unverified individuals, opening the door to insider threats, fraud, and compliance violations.

These teams need to integrate seamless, secure identity verification into credential issuance workflows without disrupting user experience or increasing operational complexity.

“Trust but verify.” — Ronald Reagan

KEY BENEFITS

Prevent unauthorized access at the identity level

Reduce operational costs through automation

Accelerate secure credential issuance

Enhance trust in your authentication ecosystem

Meet regulatory requirements for identity assurance

INTEGRATED IDENTITY VERIFICATION FOR SEAMLESS VALIDATION

Axiad Confirm is designed to integrate identity verification into your existing credential management processes without requiring additional systems or vendors. Through document and biometric checks, Confirm ensures that every credential issued is bound to a verified identity. This reduces the risk of issuing credentials to bad actors and supports Zero Trust initiatives by validating trust at the point of identity proofing.

Features:

Government ID
Scanning and Validation

Liveness Detection and
Biometric Matching

Inline integration with
Axiad Conductor's
credential management
workflows

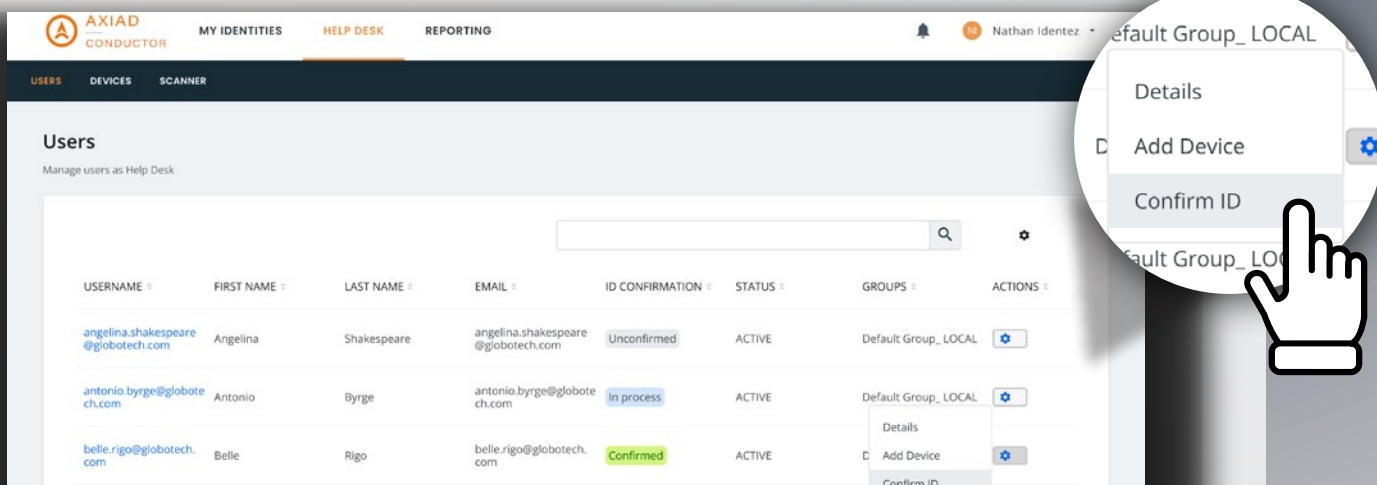

Support for remote
and in-person
verification scenarios

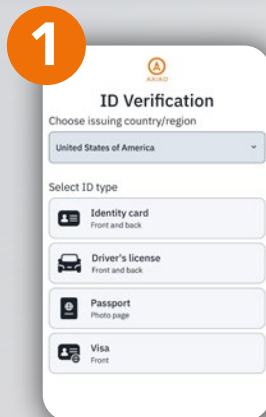

END-TO-END AUTHENTICATION AND VERIFICATION STARTS HERE

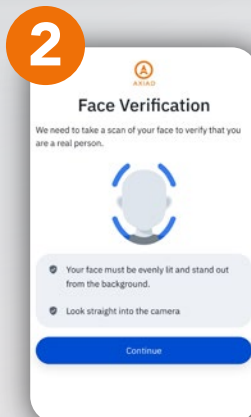

Axiad Confirm empowers organizations to confidently verify user identities before issuing credentials, during renewal, and in high-risk interactions.

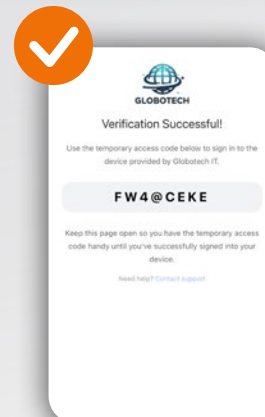

A STREAMLINED SIMPLE PROCESS CAPTURES VERIFICATION IN REAL TIME.

Uploading government-issue credentials.

Facial confirmation of the user's identity.

Successful completion of verification process.
